PROFFESIONAL SUMMARY

Diligent and adaptable Electronics & Communication engineering fresher with a robust academic background and hands on exposure to problem-solving. Experienced through internships at major organizations and proficient in a diverse technical stack, ranging from **VLSI Design** and **Embedded Systems** to **Programming** and **Visualization**. Eager to apply technical precision and creative communication skills to roles in Business Analysis, Operations, or Technology Consulting.

TECHNICAL SKILLS

Design & Visualization: Graphic Designing

Programming: C, C++, Java, Python

Hardware & Tools: Verilog, MATLAB, Cadence Virtuoso, Xilinx Vivado, Keil uVision, Proteus 7, TinkerCAD

Soft Skills: Decision Making, Time Management, Planning & Organizing

Languages: Kannada (Native), English (Professional)

WORK & TRAINING EXPERIENCE

Internship – Bharat Electronics Limited (BEL) 05/2025 – 06/2025

- Gained exposure to advanced defense communication systems and radar technologies, focusing on **MFSTAR** and **LRSAM** in the Advanced Defence System Navy (ADSN SBU).

Internship – VLSI Design (Internshala Training) 07/2024 – 08/2024

- Completed training in **VLSI design** using **Verilog**, **Cadence Virtuoso**, and **Xilinx Vivado**. Gained practical experience in digital design workflows.

Internship – Summer Development Program 05/2024 – 06/2024

- Worked on **PCB Design** using **TinkerCAD**. Learned electronic circuit design, testing, and implementation.

Internship – Embedded Developer Virtual 10/2023 – 11/2023

- Worked on **embedded systems** using **Keil uVision** and **Proteus**. Built microcontroller-based projects through simulations.

PROJECTS

Ear-Wearable SpO₂ Monitoring System (August 2025 – Present) | [Link](#)

- Developed an **ear-wearable device** for continuous SpO₂ and heart rate monitoring for workers in low ventilation environments | Implemented features including **Microcontroller + Bluetooth integration** and **Machine learning** for anomaly detection | **Impact:** Enhances worker safety, prevents hypoxia-related accidents, and supports **Industrial IoT** applications in mining and construction.

Project – Low-Power Clock-Gated TSPC Flip-flop (Completed)

- Designed and implemented a **low-power clock-gated TSPC flip-flop** to reduce excessive power consumption via the **Clock gating technique** | Used the **VLSI design tool Xilinx Vivado** for verification and performance analysis | **Impact:** Achieved significant power savings, contributing to the design of sustainable low-power **VLSI systems** for processors and IoT devices.

Automatic Washing Machine using FPGA (Completed) | [Link](#)

- Designed and implemented an automatic washing machine control system using Verilog HDL on the **Artix-7 FPGA board** | Developed **RTL design and simulated operations** in Xilinx Vivado for wash, rinse, and spin cycles | Tested functionality on **FPGA** hardware to ensure optimized performance and reliability | **Impact:** Demonstrated **FPGA-based** automation for efficient and intelligent appliance control.

EDUCATION

GITAM University | B.E. ECE (2022 – Present) | CGPA: 7.57

Shree Vani PU College | PUC/12th (2020 – 2022) | CGPA: 9.1

Swamy Vivekananda English High School | SSLC/10th (2019 – 2020) | CGPA: 9.8

CERTIFICATIONS, TRAINING, LEADERSHIP & ACTIVITIES

BEL Internship (2025) | Smart India Hackathon (2025) | Summer Development Program - GITAM (2024) |

VLSI Design - Internshala (2024) | Smart India Hackathon (2025) | Embedded Developer Virtual Internship (2023)

IEEE Member & Vice Secretary - IEEE, GITAM (10/2024 – Present) | Participated in Smart India Hackathon (2024 & 2025) | IEEE Member & Social Media Manager - IEEE, GITAM (06/2023 – Present)
